

Signal Analysis for Radio Monitoring

Edition 2018

EACH SIGNAL IS INFORMATION

Dipl.- Ing. Roland Proesch

Signal Analysis for Radio Monitoring

Edition 2018

Books on Demand GmbH

**Description of techniques to analyse
unknown waveforms**

Bibliografische Information der Deutschen Nationalbibliothek
Die Deutsche Nationalbibliothek verzeichnet diese Publikation in
der Deutschen Nationalbibliografie; detaillierte bibliografische

Disclaimer:

The information in this book has been collected over years. The main problem is that there are not many open sources to get information about this sensitive field. Although I tried to verify this information from different sources it may be that there are mistakes. Please do not hesitate to contact me if you discover any wrong description.

Content (New chapter are marked yellow)

1. LIST OF PICTURES	15
2. LIST OF TABLES	25
3. GENERAL	29
4. INTRODUCTION	31
Tools	31
Audio Tools	31
Adobe Audition 1.5 or 3.0	31
Sound Card Oscilloscope	33
Analysis Tools	35
Signals Analyzer	35
Decoding Tools	35
CODE 300-32	35
go2DECODE	40
Bit Analysis	43
go2ANALYSE	43
Recordings and Playback	48
IQ File Format	48
Wave File Format	49
Recognizing File Formats	52
Audio, real, one channel	52
Audio, real, two channels	53
I/Q, complex, two channels	54
I/Q, complex, one channel	56
Sound Card Clock Correction	56
Measurement of the Clock Error with CheckSR	57
Clock Correction Example HOKA Code 300-32	59
Clock correction using a FAX station	59
Clock correction using a STANAG signal	60
Clock Correction with Signals Analyzer SA	62
Clock correction using a STANAG signal	62
5. DESCRIPTION OF WAVEFORMS AND ANALYSIS	66

Analogue Modulation	66
Amplitude Modulation (AM)	66
Double Sideband Reduced Carrier (DSB-RC)	67
Double Sideband Suppressed Carrier (DSB-SC)	67
Single Sideband Full Carrier	68
Single Sideband Reduced Carrier (SSB-RC)	69
Single Sideband Suppressed Carrier (SSB-SC)	70
Single Sideband Modulation (SSB)	70
Independent Sideband Modulation (ISB)	71
Vestigial Sideband Modulation (VSB)	72
Frequency Modulation (FM)	73
Wide Frequency Modulation (WFM)	73
Pre-emphasis and De-emphasis	75
Analysis of a WFM signal	75
Digital Waveforms	78
Amplitude Shift Keying (ASK)	78
Analysis of an ASK	81
Determination of Baud rate of an ASK	81
Oscilloscope Display	81
Spectrum Measurement	81
Eye Diagram Measurement	83
Frequency Shift Keying (FSK)	86
Analysis of a FSK	86
Center, Mark and Space Frequency	87
Frequency Shift	87
Baudrate (Bd)	87
Modulation Index	88
Automatic Detection of Center Frequency	90
Manual Detection of Center Frequency	90
Frequency Resolution of FFT	91
Frequency Measurements	92
Single Cursor	92
Two Cursors	92
Three or Harmonic Cursor	93
Determination of Baud rate	94
Baud rate by Sonogram	94
Baud rate by Spectrum via the Envelope Method	95
Baud Rate by Time Length of a Demodulated Bit Stream	96
Auto-Correlation Function ACF for a FSK signal	98
ACF measurement of a FSK signal with HOKA Code300-32	101

ACF measurement of a FSK signal with Signals Analyzer	101
Continuous Phase Frequency Shift Keying (CPFSK)	104
Double Frequency Shift Keying (DFSK)	104
Analysis of a TWINPLEX Signal	105
Constant Envelope 4-Level Frequency Modulation (C4FM)	110
Minimum Shift Keying (MSK)	111
Tamed Frequency modulation (TFM)	112
Gaussian Minimum Shift Keying (GMSK)	113
Recognition of a GMSK Signal	113
Multi Frequency Shift Keying (MFSK)	116
Analysis of MFSK signals	116
Phase Shift Keying (PSK)	121
Binary Phase Shift Keying (BPSK)	121
Shaped Binary Phase Shift Keying (SBPSK)	123
Quadrature Phase Shift Keying (QPSK)	123
Offset Quadrature Phase Shift Keying (OQPSK)	125
Staggered Quadrature Phase Shift Keying (SQPSK)	127
$\pi/4$ Quadrature Phase Shift Keying ($\pi/4$ QPSK)	127
Compatible Differential Offset Quadrature Phase Shift Keying (CQPSK)	128
Coherent Phase Shift Keying (CPSK)	128
Differential Coherent Phase Shift Keying (DCPSK)	128
8PSK Modulation	129
Differential Phase Shift Keying (DPSK)	129
Differential Binary Phase Shift Keying (DBPSK)	130
Differential Quadrature Phase Shift Keying (DQPSK)	130
Differential 8 Phase Shift Keying (D8PSK)	130
Quadrature Amplitude Modulation (QAM)	130
Analysis of a PSK	132
Measurement of Baud rate and Center Frequency	132
Baud rate Measurement with AM- or ASK-Method on PSK Signals	132
Phase Tools CODE 300-32	137
Power Spectrum 600 Bd BPSK	138
Measurement of exact Center Frequency	139
Example 8PSK A	141
Absolute PSK (PSK-A) and Differential PSK (PSK-B)	145
PSK Types and their Behaviour	148
PSK2-A	148
PSK2-B	148
PSK4-A	150
PSK4-B	151

PSK8-A	153
PSK8-B	154
Comparing MSK and DBPSK	156
Auto-Correlation Function ACF for a PSK signal	160
ACF Function in Signals Analyzer SA	160
ACF Function in HOKA Code 300-32	163
PSK-Signals and idle condition	164
Idle condition PSK2-A	166
Idle condition PSK2-B	168
Idle condition PSK4-A	170
Idle condition PSK4-B	172
Idle condition PSK8-A	174
Idle condition PSK8-B	176
Orthogonal Frequency Division Multiplexing (OFDM)	178
Analysis of an OFDM or Multicarrier Signals	179
Measurements on a BR6028 Signal	179
Measurements on a CIS 12 Signal	181
Measurements on an OFDM Signal with 45 Channels	184
Measurements on a CODAN Signal	186
OFDM Measurements with Signals Analyzer	189
Spread Spectrum (SS) Modulation	195
Direct Sequence Spread Spectrum (DSSS)	195
Frequency Hopping Spread Spectrum (FHSS)	195
Analysis of a Frequency Hopping Signal FSK	196
Analysis of a Frequency Hopping Signal MFSK	202
Analysis of a Frequency Hopping Signal PSK	204
Analogue Pulse Modulation	208
Pulse Amplitude Modulation (PAM)	208
Pulse Width Modulation (PWM)	208
Pulse Position Modulation (PPM)	208
Digital Pulse Modulation	209
Pulse Code Modulation (PCM)	209
Delta Modulation	210
Various Analysis methods	211
Analysis of Burst Signals	211
SITOR ARQ Mode	211
Analysis of RADAR Signals	215
Principle	215
Radio frequency	215

Antenna scan rate SR	216
Transmit time or pulse width/pulse duration PW/PD	216
Pulse group repetition interval PGRI	216
Pulse repetition time PRT	217
Pulse repetition frequency PRF	218
Pulse Amplitude PA	218
Radar Frequency Bands	218
Analysis of an Over the Horizon Radar OTHR Signal	221
Frequency Modulation Continuous Wave (FMCW)	222
Frequency Modulation on Pulse FMOP	224
Analysis of a VHF Radar Signal	226
Analysis of Satellite Signals	233
SCPC Channels Parameter Auto-Correlation Function	235
SCPC BPSK FEC ½ (0.5)	235
SCPC BPSK FEC ¾ (0.75)	235
SCPC BPSK FEC 7/8 (0.875)	236
SCPC QPSK FEC ½ (0.5)	236
SCPC QPSK FEC ¾ (0.75)	237
SCPC QPSK FEC 7/8 (0.875)	237
SCPC 8PSK FEC ½ (0.5)	238
SCPC 8PSK FEC ¾ (0.75)	238
SCPC 8PSK FEC 7/8 (0.875)	239
SCPC 16QAM FEC ½ (0.5)	239
SCPC 16QAM FEC ¾ (0.75)	240
SCPC 16QAM FEC 7/8 (0.875)	240
Analysis of a SCPC signal with SA	243
SCPC QPSK FEC ¾ (0.75)	247
6. FINGERPRINTING	249
General	249
Pre-Carrier and Post-Carrier	249
Fingerprinting with MFSK Signals	251
7. ADDITIONAL INFORMATION	253
Description of Modulation States	253
Asynchronous Data Transmission	253
Synchronous Data Transmission	254
Simplex	254
Duplex	254
Half Duplex	254

Semi Duplex	254
Baud Rate, Bit Rate, Symbol Rate	255
Bit Rate	255
Symbol Rate	255
Baud rate	255
Data Formats	256
NRZ (Non Return to Zero)	258
NRZ (S) (Non Return to Zero - Space)	258
NRZ (M) (Non Return to Zero - Mark)	258
Bi-Φ-L (Biphase Level)	258
Bi-Φ-S (Biphase Space)	258
Bi-Φ-M (Biphase Mark)	258
Coding	260
Code	260
Codes in Communication used for Brevity	260
An example: the ASCII code	260
Interleaving in Error-Correction Coding	261
Interleaving Examples	261
Codes to Detect or Correct Errors	262
Error-Correcting Code (ECC)	262
Forward Error Correction (FEC)	263
Convolutional Code	264
Viterbi Algorithm	264
Reed-Solomon Error Correction	265
Overview of the Method	265
Properties of Reed-Solomon Codes	266
Use of Reed-Solomon Codes in Optical and Magnetic Storage	266
Timeline of Reed-Solomon Development	267
Satellite Technique: Reed-Solomon + Viterbi coding	267
Turbo Code	267
Shannon-Hartley Theorem	268
Theorem	268
Examples	269
Used code tables	270
ITA2, ITA2P and ITA3(CCIR342-2)	270
Russian MTK2	271
Chinese Telegraph Code	272
CCIR476-4, HNG-FEC, PICCOLO MK VI	274
ITA 2 P	276
ITA 3	276

CCIR 476	276
ASCII / CCITT 5	277
CCIR 476	278
ASCII / CCITT 5	278
Channel access methods	286
Frequency-Division Multiple Access (FDMA)	286
Time Division Multiple Access (TDMA)	286
Code Division Multiple Access (CDMA)	287
Orthogonal Frequency Multiple Access (OFDMA)	287
The OSI Reference Model	289
The Physical Layer	290
The Data Link Layer	290
The Network Layer	291
The Transport Layer	292
The Session Layer	293
The Presentation Layer	293
The Application Layer	294
Protocols	295
ACP127	295
STANAG 4406 Messaging	296
STANAG 5066	296
X.25	298
RSX.25	306
Automatic Link Establishment (ALE)	306
Designation of Emissions	311
Determination of Necessary Bandwidths	319
Table of Systems sorted by Baud rate	329
8. ABBREVIATIONS	361
9. INDEX	371

1. List of Pictures

<i>Picture 1: Main view Adobe Audition 1.5.....</i>	32
<i>Picture 2: View of a waveform in Adobe Audition 1.5.....</i>	32
<i>Picture 3: Time measurement of an OTHR.....</i>	33
<i>Picture 4: Main view of the Soundcard Oscilloscope</i>	34
<i>Picture 5: Signals Analyzer.....</i>	35
<i>Picture 6: Main view CODE 300-32.....</i>	36
<i>Picture 7: Phase constellation with and without noise</i>	38
<i>Picture 8: CODE300 Symbol rate measurement of an 8PSK</i>	38
<i>Picture 9: CODE300 FSK oscilloscope</i>	38
<i>Picture 10: CODE300 Speed bit measurement.....</i>	39
<i>Picture 11: CODE300 spectrogram.....</i>	39
<i>Picture 12: go2DECODE main screen</i>	40
<i>Picture 13: go2DECODE signal identification.....</i>	41
<i>Picture 14: go2DECODE production.....</i>	41
<i>Picture 15: go2DECODE measurement with harmonic cursors</i>	42
<i>Picture 16: go2DECODE analysis display.....</i>	42
<i>Picture 17: go2DECODE phase constellation.....</i>	43
<i>Picture 18: go2ANALYSE bit display.....</i>	44
<i>Picture 19: Bit stream view with pattern search.....</i>	45
<i>Picture 20: Bit display parameters</i>	45
<i>Picture 21: Different display modes.....</i>	46
<i>Picture 22: go2ANALYSE autocorrelation</i>	47
<i>Picture 23: Songaram of a real mono signal</i>	53
<i>Picture 24: Spectrum of a real mono signal</i>	53
<i>Picture 25: Sonogram of a stereo signal.....</i>	53
<i>Picture 26: Spectrum of a stereo signal.....</i>	54
<i>Picture 27: Phase display of a stereo audio signal.....</i>	54
<i>Picture 28: I/Q baseband signal sonogram</i>	54
<i>Picture 29: I/Q baseband signal spectrum.....</i>	55
<i>Picture 30: I/Q baseband signal phase display.....</i>	55
<i>Picture 31: I/Q baseband signal sonogram converted to real</i>	55
<i>Picture 32: I/Q baseband signal spectrum converted to real.....</i>	55
<i>Picture 33: I/Q baseband signal one channel sonagram</i>	56
<i>Picture 34: I/Q baseband signal one channel spectrum</i>	56
<i>Picture 35: Result of CheckSR.EXE.....</i>	57

<i>Picture 36: Clock correction with a FAX station</i>	59
<i>Picture 37: Clock correction with a FAX station after adjustment.....</i>	60
<i>Picture 38: Clock correction with a STANAG 4285 signal</i>	61
<i>Picture 39: Clock correction with a STANAG 4285 signal after adjustment</i>	62
<i>Picture 40: Clock Correction with Signals Analyzer step 1</i>	63
<i>Picture 41: Clock Correction with Signals Analyzer step 2</i>	63
<i>Picture 42: Clock Correction with Signals Analyzer step 3</i>	64
<i>Picture 43: Different AM waveforms.....</i>	66
<i>Picture 44: Spectrum and sonogram of an amplitude modulation</i>	67
<i>Picture 45: Spectrum of a double sideband suppressed carrier signal</i>	68
<i>Picture 46: Spectrum and sonogram of a single sideband modulation with full carrier</i>	69
<i>Picture 47: Spectrum and sonogram of a single sideband modulation with reduced carrier.....</i>	70
<i>Picture 48: Spectrum of a single sideband modulation</i>	71
<i>Picture 49: Spectrum of an independent modulated signal</i>	72
<i>Picture 50: Frequency Modulation.....</i>	73
<i>Picture 51: Spectrum and sonogram of a frequency modulation.....</i>	73
<i>Picture 52: Spectrum of a wide FM broadcast transmitter</i>	74
<i>Picture 53: Spectrum of FM stereo signal with sub-channels</i>	75
<i>Picture 54: Amplitude Shift Keying (ASK).....</i>	78
<i>Picture 55: Spectrum of an ASK with 100 Bd.....</i>	79
<i>Picture 56: On Off Keying OOK.....</i>	79
<i>Picture 57: Oscilloscope display of an ASK.....</i>	80
<i>Picture 58: Measurement of ASK baud rate</i>	81
<i>Picture 59: Different method of baud rate measurement of an ASK</i>	82
<i>Picture 60: Spectrum measurement of an ASK with 200 Bd.....</i>	82
<i>Picture 61: Spectrum measurement of an ASK with 2000 Bd.....</i>	83
<i>Picture 62: Different measurement of the baud rate of an ASK</i>	83
<i>Picture 63: Measurement with eye diagram.....</i>	84
<i>Picture 64: Eye diagram with moderate noise.....</i>	85
<i>Picture 65: Eye diagram with more noise</i>	85
<i>Picture 66: Frequency Shift Keying (FSK)</i>	86
<i>Picture 67: Spectrum of an FSK.....</i>	86
<i>Picture 68: Center, mark and space frequency.....</i>	87
<i>Picture 69: Frequency shift</i>	87
<i>Picture 70: FSK with a modulation index M = 1.....</i>	89
<i>Picture 71: FSK with a modulation index M = 6.....</i>	89

<i>Picture 72: FSK with a modulation index $M = 10$</i>	89
<i>Picture 73: MSK with a modulation index $M = 0.5$</i>	90
<i>Picture 74: Automatic measurements</i>	90
<i>Picture 75: Automatic baud rate and shift measurement</i>	90
<i>Picture 76: Spectrogram display with low FFT resolution</i>	91
<i>Picture 77: Spectrogram display with high FFT resolution</i>	92
<i>Picture 78: Mark and space frequency measurement</i>	93
<i>Picture 79: Frequency measurement with three or harmonic cursor</i>	93
<i>Picture 80: Baud rate measurement with sonogram</i>	94
<i>Picture 81: Baud rate measurement with sonogram and harmonic cursor</i>	95
<i>Picture 82: Spectrum envelope method display</i>	95
<i>Picture 83: Frequency measurement of Baud rate</i>	96
<i>Picture 84: Demodulated FSK signal</i>	96
<i>Picture 85: Bit length measurement with two cursors</i>	97
<i>Picture 86: Bit length measurement with harmonic cursor</i>	97
<i>Picture 87: ACF of a Fax signal</i>	99
<i>Picture 88: ACF of a STANAG 4285 signal measured with HDSDR</i>	99
<i>Picture 89: ACF function in CODE 300-32</i>	101
<i>Picture 90: ACF result on CODE300-32</i>	101
<i>Picture 91: ACF measurement with SA step 1</i>	102
<i>Picture 92: ACF measurement with SA step 2</i>	102
<i>Picture 93: ACF measurement with SA step 3</i>	102
<i>Picture 94: ACF measurement with SA step 4</i>	103
<i>Picture 95: ACF measurement with SA step 5</i>	103
<i>Picture 96: Spectrum of a CPFSK with 100 Bd</i>	104
<i>Picture 97: Spectrum of a DFSK</i>	105
<i>Picture 98: Spectrum of a typical TWINPLEX signal</i>	106
<i>Picture 99: Measurement of TWINPLEX tone distance</i>	106
<i>Picture 100: Baud rate measurement of a TWINPLEX signal</i>	107
<i>Picture 101: Sonogram of a TWINPLEX signal</i>	108
<i>Picture 102: Example of a Voice Frequency Telegraphy (VFT)</i>	108
<i>Picture 103: IQ Plot of C4FM</i>	110
<i>Picture 104: Sonogram and spectrum of C4FM in idle mode</i>	111
<i>Picture 105: Spectrum of a MSK</i>	111
<i>Picture 106: Minimum Shift Keying</i>	112
<i>Picture 107: One time squaring of a MSK</i>	112

<i>Picture 108: Spectrum of a Tamed Frequency Modulation (TFM 3) with 100 Bd</i>	113
<i>Picture 109: BPSK signal with 1200 Bd</i>	113
<i>Picture 110: GMSK signal with 1200 Bd</i>	114
<i>Picture 111: Constellation display of a BPSK signal</i>	115
<i>Picture 112: Constellation display of a GMSK signal</i>	115
<i>Picture 113: Spectrum of a MFSK with 12 tones</i>	116
<i>Picture 114: MFSK in the spectrogram view</i>	117
<i>Picture 115: Number of tones of a MFSK</i>	117
<i>Picture 116: MFSK with 36 tones</i>	118
<i>Picture 117: Spectrum of a MFSK with 36 tones</i>	118
<i>Picture 118: Measurement of tone duration of a MFSK</i>	118
<i>Picture 119: MFSK measurement with harmonic cursor</i>	119
<i>Picture 120: Tone duration measurement with MFSK oscilloscope</i>	119
<i>Picture 121: Determination of numbers of tones of a MFSK</i>	120
<i>Picture 122: Phase shift Keying</i>	121
<i>Picture 123: BPSK-A</i>	121
<i>Picture 124: Phase plane of a BPSK</i>	122
<i>Picture 125: Spectrum of a BPSK with 600 Bd</i>	122
<i>Picture 126: BPSK-B</i>	122
<i>Picture 127: QPSK-A</i>	123
<i>Picture 128: QPSK-B</i>	124
<i>Picture 129: Spectrum of a QPSK with 600 Bd</i>	124
<i>Picture 130: Phase plane of a QPSK</i>	124
<i>Picture 131: Phase plane of an OQPSK (left) compared to QPSK (right)</i>	125
<i>Picture 132: OQPSK with one squaring</i>	125
<i>Picture 133: OQPSK with a double squaring</i>	126
<i>Picture 134: Analysis display of an OQPSK</i>	126
<i>Picture 135: Analysis display of a DBPSK</i>	127
<i>Picture 136: Phase constellation of a $\pi/4$ QPSK</i>	127
<i>Picture 137: Phase Plane of an 8PSK</i>	129
<i>Picture 138: Spectrum of an 8PSK with 600 Bd</i>	129
<i>Picture 139: Example of an 8QAM and 16QAM in the Phase Plane</i>	131
<i>Picture 140: Spectrum of a QAM8 with 600 Bd</i>	131
<i>Picture 141: Spectrum of a QAM16 with 600 Bd</i>	131
<i>Picture 142: Amplitude behavior of an absolute BPSK</i>	133
<i>Picture 143: Amplitude behavior of a differential BPSK</i>	134

<i>Picture 144: Amplitude behavior of an absolute QPSK</i>	134
<i>Picture 145: Amplitude behavior of a differential QPSK</i>	135
<i>Picture 146: Amplitude method of symbol rate measurement</i>	135
<i>Picture 147: Recorded signal for ASK-method</i>	136
<i>Picture 148: Setup for ASK-method</i>	137
<i>Picture 149: Result of the ASK-method</i>	137
<i>Picture 150: Estimation of the center frequency</i>	138
<i>Picture 151: Symbol rate measurement of a PSK</i>	138
<i>Picture 152: Baud rate of a PSK signal</i>	138
<i>Picture 153: Spectrum of a BPSK</i>	140
<i>Picture 154: Centering of BPSK I</i>	140
<i>Picture 155: Centering of BPSK II</i>	140
<i>Picture 156: 8PSK after single squaring</i>	141
<i>Picture 157: 8PSK after double squaring</i>	141
<i>Picture 158: 8PSK after triple squaring</i>	141
<i>Picture 159: Phase constellation of an 8PSK</i>	142
<i>Picture 160: Double squaring of a QPSK-A</i>	146
<i>Picture 161: Double squaring of a QPSK-B</i>	146
<i>Picture 162: Analysis display of a MSK with 600 Bd</i>	156
<i>Picture 163: Analysis display of a DBPSK with 600 Bd</i>	157
<i>Picture 164: Squaring of a MSK with 600 Bd</i>	157
<i>Picture 165: Squaring of a DBPSK with 600 Bd</i>	158
<i>Picture 166: Constellation display of a DBPSK</i>	158
<i>Picture 167: Constellation display of a MSK</i>	159
<i>Picture 168: ACF function in SA step 1</i>	160
<i>Picture 169: ACF function in SA step 2</i>	160
<i>Picture 170: ACF function in SA step 3</i>	161
<i>Picture 171: ACF function in SA step 4</i>	161
<i>Picture 172: ACF function in SA step 5</i>	162
<i>Picture 173: ACF function in SA step 6</i>	162
<i>Picture 174: ACF function in SA step 7</i>	162
<i>Picture 175: ACF function in SA step 8</i>	163
<i>Picture 176: ACF function in SA step 9</i>	163
<i>Picture 177: ACF function in Code300-32 step 1</i>	164
<i>Picture 178: ACF function in Code300-32 step 2</i>	164
<i>Picture 179: RYRY loop in a Baudot transmission</i>	165

<i>Picture 180: Idle condition PSK2-A 2400 Bd</i>	166
<i>Picture 181: Idle condition PSK2-A 600 Bd</i>	167
<i>Picture 182: Idle condition PSK2-B 2400 Bd</i>	168
<i>Picture 183: Idle condition PSK2-B 600 Bd</i>	169
<i>Picture 184: Idle condition PSK4-A with 2400 Bd</i>	170
<i>Picture 185: Idle condition PSK4-A 600 Bd</i>	171
<i>Picture 186: Idle condition PSK4-B with 2400 Bd</i>	172
<i>Picture 187: Idle condition PSK4-A with 600 Bd</i>	173
<i>Picture 188: Idle condition PSK8-A with 2400 Bd</i>	174
<i>Picture 189: Idle condition PSK8-A with 600 Bd</i>	175
<i>Picture 190: Idle condition PSK8-B with 2400 Bd</i>	176
<i>Picture 191: Idle condition PSK8-B with 600 Bd</i>	177
<i>Picture 192: Comparison of FDM and OFDM</i>	178
<i>Picture 193: Spectrum of OFDM with 45 channels</i>	178
<i>Picture 194: OFDM with 45 carriers</i>	179
<i>Picture 195: Spectrum of a BR6028 signal</i>	180
<i>Picture 196: Shift measurement of a BR6028 signal</i>	180
<i>Picture 197: Measurement with the FSK oscilloscope</i>	181
<i>Picture 198: CIS12/MS5 spectrum with reference tone</i>	181
<i>Picture 199: CIS 12/MS5 spectrum in idle mode</i>	182
<i>Picture 200: CIS12 in the phase spectrum</i>	182
<i>Picture 201: Selection of one channel of a CIS12</i>	182
<i>Picture 202: Symbol rate measurement on a CIS12 signal</i>	183
<i>Picture 203: Single squaring of one channel of a CIS12 signal</i>	183
<i>Picture 204: Double squaring of one channel of a CIS12 signal</i>	183

3. General

For years shortwave radio has been used for communication beyond the line of sight. With the introduction of worldwide satellite services in the geostationary or low earth orbits HF radio communication lost more and more in interest.

But with the introduction of new, sophisticated modems and digital broadcast services in high quality HF communication has seen a renewal during the last years.

Shortwave radio, however, has some qualities that will ensure its attractiveness for some time. The most important one for commercial users is that there is no charge for using the ionosphere.

In the military context this translates to low cost, potentially global communication that has the important attributes of national ownership and military control.

And in comparison to satellite services shortwave communication is harder to disrupt.

The good old radio for shortwave has been perfected during the last years in several ways. Information data rates of a few tens of bits per second were increased to more than 19200 bit/s by sophisticated modem techniques and error correction. Algorithms were created to adapt transmission parameters to channel quality or initiate a change to a better channel. Passive and active channel analysis, i.e. sending and measuring test signals on assigned pool frequencies have been developed to solve problems of channel distortions.

There are new signals “on air” nearly every month. That makes it very difficult to keep track of them. And they often sound the same way.

This book shall give an introduction how to work with signals on shortwave and get that information which is necessary to identify the different waveforms. It will show some techniques for measurement the main parameter of digital signals.

It will also show some tools which I have used over the years to come to a result in a relative short time frame.

You are not bound to those tools described in this book. There are many others with a similar functionality which will do the job.

And please keep in mind:

Signal analysis is not an easy task!

If you are doing it only occasionally it will be difficult to get satisfactory results. Signal analysis needs a constant practice.

And sometimes it may be a good idea not to choose an obvious way to do signal analysis.

Most signal analysis tasks are performed on recorded signals. For a successful work you will need good recordings. Information that is lost i.e. by noise can never be reconstructed.

4. Introduction

Tools

Audio Tools

Adobe Audition 1.5 or 3.0

Adobe Audition 1.5 is professional audio editing software designed for demanding audio and video professionals, Adobe Audition offers advanced audio mixing, editing, and effects processing capabilities.

This software is a complete audio studio: it can handle digital audio tasks within a single application. It has the possibility to work with mono and stereo waveforms. They can be edited, viewed, audio effects can be added. Wave files or parts of them can be played in loops for measurement on the signals. With the help of many audio effects and DSP tools, signals can be improved for further analysis. Waves can be edited, stored or the sampling rate can be changed up. Files can have a sample rate up to 10 MHz, including standard rates such as 44.1 kHz (CD quality), 88.2 kHz, 96 kHz (DVD quality), and 192 kHz.

The software makes it easy to work with recorded audio files from the receiver. Signals can be analysed down to a single sinus wave which makes finger printing very easy. Distorted signals can be filtered with a graphical equalizer. It is also possible to adjust the level of the signal for the complete waveform or parts of it.

Recorded signals can be re-sampled and stored in different forms.

The following picture shows the main screen of Adobe Audition 1.5:
